

Glow Hydrofacial Post Care Instructions

POST-CARE INSTRUCTIONS

- Immediately after treatment your skin may appear rosy and mild erythema (redness) may be visible.
- Slight blotchiness may also be temporarily visible, especially if a deeper treatment has been provided.
- You are advised to wear adequate sun protection post-treatment.
- Skin-type appropriate home care products should be reviewed as part of a normal post-care regime.
- Treatments may be done in weekly, bi-weekly or monthly intervals as determined appropriate for your skin type and condition.

DAY 1-2:

The healing time for any given treatment varies between different clients. The following represents the general recovery phases you might expect. Individual clients may experience variations from this course.

A mild swelling and rosiness of the skin occurs immediately. It is possible for clients to have more delicate areas swollen for a few hours, but this swelling will subside. There may be a pink tone and very minimal warmth emanating from the area for the first couple of hours.

Activity:

Post-redness is mild, and you may return to regular activities immediately or as directed by your practitioner. We would suggest to minimize excessive friction on the area whenever possible for the first few hours.

Moisturizer:

Moisturizer may be applied immediately after each treatment, and then should be applied regularly throughout the course of the treatment.

Make-up:

Can be applied immediately after the treatment.
